

ABSTRACT

{0001} A caddy for a container, such as a waste container is configured to be disposed on the rim of a container and receive and hold various implements. The caddy may include handles suitable to push the container when the caddy is attached to it. The caddy may also include a flat, front end portion to prevent rolling when the container is tipped over. The caddy may be used in a method of organizing janitorial implements and a method of removing waste liners from a container.
